Office Action Summary

Applicant's election with traverse of group II in Paper No. 6 is acknowledged. The traversal is on the ground(s) that no serious burden because the inventors are related. This is not found persuasive because distinctness has been explained and burden shown by the fact that the inventions lie in entirely different classes.

The requirement is still deemed proper and is therefore made FINAL.

As to the election of species requirement, neither need be shown. To avoid the requirement, applicants need only state on the record that the species are equivalent. However, a rejection of one species shall then apply to all. 37 CFR 1.141, cited by applicants concerns applications filed under 35 USC 371 and thus is not relevant here.

The elections of species were exemplary and applied to both groups.

In view of applicants' election of group II, they are restated for this group:

A. Claim 49 is generic to a plurality of disclosed patentably distinct species comprising acrylic acid-containing monomers. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
